Blended CAC (all plans)

CLV:CAC ratio by plan

Every plan clears 3x. CAC is one blended figure, so treat ratios as directional: the ranking holds, the multiples are inflated.

CLV by plan

Average monthly revenue × average tenure.

Average tenure by plan

Starter customers leave after 9.4 months on average; keeping them three months longer adds about \$650 each.

tenure)

Churn rate by feature usage

No customer using 60%+ of features churned, and none with an NPS survey score of 7+.

Risk score distribution: active vs churned

Composite score: 50% feature usage, 30% NPS, 20% tenure. Higher = riskier.

Low-usage active customers by plan

The 85 active customers below the usage threshold (not all 287 active customers).
